

# LIT-ISO

## Features Library & Asset Inventory

A complete catalogue of everything that exists — live, dark, planned, legacy and scratch —  
with a recommended **keep / salvage / archive** disposition for each.

# Contents

# 1 · How to read this library

LIT-ISO is an original isometric **survival-crafting LitRPG** — "a survival game, like a LitRPG book." The player transmigrates into another world, has **seven days** to gather, craft, fight and explore while being silently graded, then on day 7 the **System** awards an emergent **F–S class** and a **profession** scaled to performance. The canonical runtime is the **IsoCore.Foundation** assembly; an older **Assembly-CSharp** world is being retired.

This document is an **inventory, not a roadmap**. Its job is to list *everything that exists or is designed* — including legacy and scratch material — so you can decide what belongs in the direct game and what should move to an archive. Every row carries a **Status** (what state it is in) and a **Disposition** (the recommended action). Treat dispositions as a starting proposal to confirm, not a decision already made.

## Status legend

|         |                                                                                              |
|---------|----------------------------------------------------------------------------------------------|
| LIVE    | Implemented in the canonical game and playable today.                                        |
| THIN    | Exists in code but incomplete, hollow, or not yet surfaced to the player ('built-but-dark'). |
| PLANNED | Designed in the docs / roadmap; not built yet.                                               |
| LEGACY  | Lives in the retiring Assembly-CSharp world, superseded by the Foundation.                   |
| SCRATCH | Experimental pipeline output / art passes — not the locked art direction.                    |

## Disposition legend

|         |                                                                                |
|---------|--------------------------------------------------------------------------------|
| KEEP    | Core to the direct game. Stays where it is.                                    |
| SALVAGE | Legacy or partial, but worth porting forward into the Foundation.              |
| ARCHIVE | Not needed in the direct game — move out to an archive (preserve git history). |
| BUILD   | Planned work to be implemented.                                                |
| DECIDE  | Owner call required before it can be classified.                               |

Snapshot: ~324 C# scripts across two assemblies, ~4,280 PNGs (most are scratch review pools), 5 live biomes, ~30 crafting recipes, 8 emergent classes, 8 professions, 4 castable abilities, and ~50 design docs. The honest one-line state, per the project's own master plan: "**a deep engine with a thin, partly-buried surface.**"

## 2 · Canonical game — LIVE & working

Systems in **IsoCore.Foundation** that run today, constructed by **FoundationBootstrap**. These are the spine of the direct game.

| Feature / System                          | Where it lives                                                           | Status | Disposition | Notes                                                                        |
|-------------------------------------------|--------------------------------------------------------------------------|--------|-------------|------------------------------------------------------------------------------|
| <b>World gen &amp; streaming</b>          | World/IsoWorld, IsoTerrainSampler, IsoChunk, IsoWorldController/Renderer | LIVE   | KEEP        | Procedural terrain, biome assignment, decoration placement, chunk streaming. |
| <b>Isometric grid &amp; sorting</b>       | Core/IsoGrid                                                             | LIVE   | KEEP        | Single source of coord + sort math. Invariant — do not change.               |
| <b>Kinematic movement</b>                 | Player/IsoFoundationPlayer                                               | LIVE   | KEEP        | World-query 'ask the world' movement; walk-up-one-step, Blink dash.          |
| <b>Inventory / hotbar / storage</b>       | Inventory/Inventory, Hotbar, StorageSystem                               | LIVE   | KEEP        | One inventory instance passed explicitly; chests/storage.                    |
| <b>Placement &amp; building</b>           | Building/PlacementSystem, PlaceableInstance, FoundationInstanceSystem    | LIVE   | KEEP        | Place objects; interior instances (tavern/home pockets).                     |
| <b>Crafting + stations</b>                | Crafting/CraftingSystem, RecipeDefinition                                | LIVE   | KEEP        | ~30 recipes with station gating. Chain depth is thin (see §3).               |
| <b>Farming</b>                            | Farming/FarmingSystem, CropDefinition/Instance                           | LIVE   | KEEP        | Till, plant, grow, harvest crops.                                            |
| <b>Harvesting / resource nodes</b>        | Harvesting/HarvestSystem, ResourceNode(Definition)                       | LIVE   | KEEP        | Trees, rocks, bushes; tool-gated gathering.                                  |
| <b>Mob spawning &amp; tiers</b>           | Mobs/Mob, MobSpawner, SettlementTownfolkSpawner                          | LIVE   | KEEP        | Wildlife + humanoid NPCs; distance difficulty + night danger.                |
| <b>Day / night cycle</b>                  | Core/DayNightSystem                                                      | LIVE   | KEEP        | Time of day drives tint, danger, audio.                                      |
| <b>Weather</b>                            | World/FoundationWeatherVisuals                                           | LIVE   | KEEP        | Mist / Drizzle / Snow / Wind + lightning flash.                              |
| <b>Audio</b>                              | Audio/SfxManager, WorldAudioController                                   | LIVE   | KEEP        | SFX + ambient/day-night music beds.                                          |
| <b>Camping &amp; wards</b>                | Survival/FoundationCampingSystem                                         | LIVE   | KEEP        | Camp overnight; wards push back night danger; mana refill.                   |
| <b>Death / respawn</b>                    | Survival/FoundationDeathSystem                                           | LIVE   | KEEP        | Death view + respawn loop.                                                   |
| <b>Dungeons &amp; portals</b>             | Dungeons/FoundationDungeonGenerator, DungeonPortalSystem                 | LIVE   | KEEP        | Deterministic instanced dungeons with rewards; portal entries.               |
| <b>Map overlay</b>                        | UI/FoundationMapOverlay                                                  | LIVE   | KEEP        | Explorable world map overlay.                                                |
| <b>Progression core</b>                   | Progression/FoundationProgression, FoundationPlayerStats                 | LIVE   | KEEP        | 6 stats (STR/DEX/INT/VIT/DEF/LUCK), XP channels, affinities, Trial evidence. |
| <b>Emergent classes &amp; professions</b> | Progression/FoundationProgression, FoundationTrialDefinitions            | LIVE   | KEEP        | 8 emergent classes + 8 professions; day-7 offers computed from play.         |

| Feature / System                      | Where it lives                                                 | Status | Disposition | Notes                                                                     |
|---------------------------------------|----------------------------------------------------------------|--------|-------------|---------------------------------------------------------------------------|
| <b>Day-7 Trial &amp; F–S forecast</b> | Progression/FoundationTrialDefinitions, UI/ClassAssignmentView | LIVE   | KEEP        | Grade forecast + class-assignment screen. Entitlements still hollow (§3). |
| <b>Abilities (Slice 1)</b>            | Progression/FoundationAbilitySystem, Dispatcher, Projectile    | LIVE   | KEEP        | flash_step / mana_bolt / ember_spark / mending_light on Q/E/R/F wheel.    |
| <b>Equipment + loot scaffold</b>      | Inventory/EquipmentLoadout, LootSystem                         | THIN   | KEEP        | Slots + loot wired into bootstrap; not fully fleshed (§3).                |
| <b>Procedural settlements</b>         | World/IsoSettlementSampler                                     | LIVE   | KEEP        | 5 distance tiers hamlet→frontier-city; spawn-next-to-hamlet guaranteed.   |
| <b>Starter quest chain</b>            | Progression/FoundationQuestDefinition                          | LIVE   | KEEP        | "First Flame, First Field" tutorial spine runs.                           |
| <b>Layered character creator</b>      | UI/CharacterCreator/* (12 scripts)                             | LIVE   | KEEP        | Layered paperdoll appearance + equipment visuals; Stardew-style target.   |
| <b>System message feed</b>            | Progression/FoundationSystemMessageFeed                        | LIVE   | KEEP        | 'The System' narration popups — a signature beat.                         |
| <b>QoL services</b>                   | QoL/FoundationQoLService                                       | LIVE   | KEEP        | Quality-of-life helpers (auto-pickup, hints, etc.).                       |
| <b>uGUI in-game HUD</b>               | UI/InGame/* (45 scripts)                                       | LIVE   | KEEP        | HUD, panels, inventory/craft/chest/quest/vendor views, ability wheel.     |

### 3 · Built-but-thin / dark — the Beta gap

Exists in code or as a stub, but hollow or hidden from the player. This is where the "deep engine, thin surface" gap lives — mostly content + small data fields wired into systems that already run.

| Feature / System                   | Where it lives                                | Status | Disposition | Notes                                                                                           |
|------------------------------------|-----------------------------------------------|--------|-------------|-------------------------------------------------------------------------------------------------|
| <b>Ability deliveries (6 of 9)</b> | Progression/FoundationAbilityDispatcher       | THIN   | BUILD       | Only Blink/Projectile/Heal live; Melee/Con e/AreaNova/Snare/SelfBuff/Aura designed, not built.  |
| <b>Status effects</b>              | (none in Foundation yet)                      | THIN   | BUILD       | No Burn/Root/Slow/Haste/Guard/Regen. NB: a legacy version exists in Combat/ — salvage (\$5).    |
| <b>Affinity coverage</b>           | Progression/FoundationProgression             | THIN   | BUILD       | Glimmer & Tide affinities unwired — mending_light + water spells don't scale F→S.               |
| <b>Class entitlements</b>          | Progression (FoundationClassRarity)           | THIN   | BUILD       | F→S is cosmetic — rarity changes a label, grants no perk; no class evolution.                   |
| <b>Profession teeth</b>            | Progression (professions)                     | THIN   | BUILD       | A label with no tier ladder, perks, or payload.                                                 |
| <b>Metal / crafting chain</b>      | Crafting/RecipeDefinition + FoundationContent | THIN   | BUILD       | Stops at copper; iron→starmetal exist as ore only. No quality, traits, or repair.               |
| <b>7-day arc surfacing</b>         | Progression + UI                              | THIN   | BUILD       | Day-7 computes offers, but day counter / preview / digest / crystallization screen are partial. |
| <b>Callings system</b>             | Progression/FoundationCallingDefinition       | THIN   | ARCHIVE     | Still present & load-bearing; owner-slated for removal (default to Wayfarer).                   |
| <b>Lighting depth</b>              | World/AmbientLightController (faked)          | THIN   | DECIDE      | Built-in pipeline; normal-map/point lights need URP migration or custom lit shader.             |
| <b>Settlement liveliness</b>       | World/IsoSettlementSampler                    | THIN   | BUILD       | ~70% scaffolded; perimeter walls/gates, district zoning, NPC schedules, vendor tiers pending.   |
| <b>Multi-cell building sort</b>    | World/IsoWorldRenderer                        | THIN   | BUILD       | Single sort value per anchor → player clips through tall buildings; needs per-row slice sort.   |
| <b>Ability VFX</b>                 | World/WorldFx (procedural fallback)           | THIN   | BUILD       | Procedural placeholders; authored VFX Lab sheets not yet imported.                              |

## 4 · Planned & designed (roadmap)

Designed in Docs/IsoCoreFoundation/25\_Master\_Plan\_To\_Beta.md and the research briefs, not yet built. Grouped by the plan's phases. All are **BUILD** items.

| Feature / System                 | Where it lives | Status  | Disposition | Notes                                                                        |
|----------------------------------|----------------|---------|-------------|------------------------------------------------------------------------------|
| A · Status system v1             | Doc 25 / 22    | PLANNED | BUILD       | Burn/Root/Slow/Haste/Guard/Regen as timer+modifier, icon row, player & mobs. |
| A · Remaining deliveries         | Doc 25         | PLANNED | BUILD       | Melee, Cone, AreaNova, Snare, SelfBuff, AuraZone wired to real effects.      |
| A · Affinity/element fix         | Doc 23         | PLANNED | BUILD       | Add Glimmer + Tide so the cozy magic strands progress.                       |
| B · Remove Callings              | Doc 25 B1      | PLANNED | BUILD       | Strip Calling picker; migrate save field; default Wayfarer (~10 files).      |
| B · Tier entitlements            | Doc 23         | PLANNED | BUILD       | Each F→S step grants stat bonuses / signature ability / title.               |
| B · Class evolution              | Doc 25 B5      | PLANNED | BUILD       | evolvesFromIds + re-score at milestones (Trailblade → Wildsign Ranger).      |
| B · Cozy capstone class          | Doc 25 B6      | PLANNED | BUILD       | ≥1 Legendary/Mythic class reachable through non-combat play.                 |
| C · Extend metal chain           | Doc 24         | PLANNED | BUILD       | copper→iron→steel→...→starmetal as data; art already exists.                 |
| C · Craft quality roll           | Doc 24         | PLANNED | BUILD       | Per-instance quality (skill+LUCK → Bent...Beloved).                          |
| C · Item tiers + traits          | Doc 24         | PLANNED | BUILD       | Plain→Mythwarm tiers; Warm/Keen/Stout traits in tooltips.                    |
| C · Repair loop                  | Doc 24         | PLANNED | BUILD       | Turn dead durability fields into repair recipes.                             |
| C · Profession ladder            | Doc 24         | PLANNED | BUILD       | F→S profession tiers + yield/quality/speed perks.                            |
| D · Equipment & loot             | Doc 25 D       | PLANNED | BUILD       | Equip for stat bonuses; mob/dungeon/chest drops rolled with quality.         |
| D · Combat readability           | Doc 25 D       | PLANNED | BUILD       | Mob telegraphs, damage feedback, non-lethal soothe/trap/ward.                |
| E · Original terrain art         | Doc 10 / 25 E  | PLANNED | BUILD       | Replace placeholder cubes via Asset Forge / PixelLab pipeline.               |
| H · Settlement identity          | Doc 26/27      | PLANNED | BUILD       | Tier perimeter pass, district zoning, NPC wandering, vendor/loot tiers.      |
| F · Save/load coverage           | Doc 25 F       | PLANNED | BUILD       | Cover all new state; bump FoundationSaveData version + migration.            |
| G · Audio / onboarding / balance | Doc 25 G       | PLANNED | BUILD       | Ability/craft/UI SFX, in-context teaching, balance pass, QA to Beta.         |

## 5 · Legacy world (Assembly-CSharp) — archive candidates

The retiring **Assembly-CSharp** codebase. Most is superseded by the Foundation and should move to an archive folder (out of the build but in git history). A few systems have **no Foundation equivalent** and are worth **salvaging** — flagged below. See `22_Legacy_Retirement_Register.md`.

| Feature / System                         | Where it lives                                                                                                                                  | Status | Disposition | Notes                                                                                               |
|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|--------|-------------|-----------------------------------------------------------------------------------------------------|
| <b>Phase-2 trial suite</b>               | TrialWeekManager_P<br>hase2, SaveGameMa<br>nager_Phase2, Seriali<br>zableData_Phase2, P<br>hase2*Bridge/Tests/V<br>isual                        | LEGACY | ARCHIVE     | Old 7-day + save implementation; fully superseded by Foundation progression.                        |

| <b>Design sub-folder</b>            | Docs/design/* (HTML reports, LPC inventories, plans)                      | SCRATCH | ARCHIVE     | Mostly LPC-era pipeline notes; LPC is no longer the art direction.                                               |
| <b>Handoff sub-folder</b>           | Docs/handoff/* (per-feature 06-13/06-14 notes)                            | LEGACY  | ARCHIVE     | Point-in-time handoffs; superseded by the master handover.                                                       |
| <b>Agent-comms</b>                  | Docs/agent-comms/* (task-ledger, from-claude, from-codex)                 | LEGACY  | ARCHIVE     | Two-agent coordination relics; project is now single-AI.                                                         |
| <b>LPC backup</b>                   | Docs/_lpc_backup/old_layers                                               | SCRATCH | ARCHIVE     | Backup of abandoned LPC layer art.                                                                               |

## 9 · Archive at-a-glance — recommended moves

The highest-value, lowest-risk moves to get the project to "only what the direct game needs." Confirm each before moving; preserve git history with `git mv`; in Unity, move assets with their `.meta` files.

| Move out of the build                                 | Why                                     | Rough size    |
|-------------------------------------------------------|-----------------------------------------|---------------|
| Assets/Generated/_Review                              | Generation-review dump, not shipped art | ~2,446 PNG    |
| Assets/Generated/LoRA + Tools/LoRA                    | Abandoned LoRA art experiments          | ~346 PNG      |
| Assets/Tilemaps/Hexagonal                             | Hex tiles — game is isometric           | ~142 tile SOs |
| Assets/Art/IsoTilesetReference                        | Clone reference imagery, not content    | ~116 PNG      |
| Assembly-CSharp Phase2 + legacy duplicates            | Superseded by IsoCore.Foundation        | ~90 scripts   |
| Docs/_archive, /design, /handoff, /agent-comms, /_lpc | Superseded notes & two-agent relics     | ~30+ docs     |
| Loose Tools .ps1 / .html one-offs                     | Ad-hoc commit/push/gallery helpers      | ~10 files     |

**Keep salvaging in mind, not just archiving.** Three legacy systems have no Foundation equivalent and may be worth porting forward rather than archiving: the **Combat status-effect** pair (a head-start on the planned status system), the **Economy** trio (auction/currency/market), and the **Guild** manager (homestead/guild vision). Decide these deliberately.

Next deliverable after you review this library: a single, contradiction-free **master design + systems document** that folds in doc 00, the master plan, and the live handover, and replaces the stale INDEX — with everything above either linked as canonical or marked archived.
